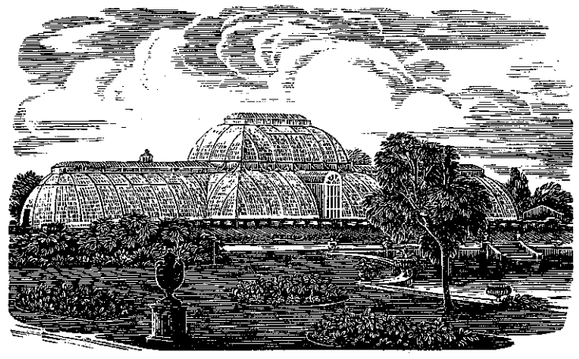
CURTIS'S BOTANICAL MAGAZINE INDEX

With a revision of the names of the plants depicted from the beginning in 1787 to the end of 1947
Volume 1 to Volume 164
To which is appended
a brief history of the magazine

BY
F. J. CHITTENDEN, O.B.E., F.L.S., V.M.H.

and an appendix giving the titles and numbers of the plates from Volume 165 to Volume 170



"With tender heed
Bringing thee chosen plants and blossoms blown
Among the distant mountains."—*Wordsworth.*

PREFACE

THERE is little doubt that a complete set of the *Botanical Magazine* provides the most comprehensive and probably the most accurate collection of plant-portraits in existence though for convenience and speed of reference there has long been a need for a consolidated index to the illustrations. It is true that the Society's *Index Londinensis* includes the plates published up to 1935, but even so it has been rather a tedious process to find particular figures especially in the more recent volumes. The Council of the Royal Horticultural Society, which since 1922 has been responsible for publishing the *Magazine*, accordingly agreed that a new index should be produced and work on this began early in 1935 under the editorship of the late Mr. F. J. Chittenden. The new index was planned to be of greater scope than its predecessors, which were simple lists of the titles of the species figured in the *Magazine*. What Mr. Chittenden attempted was much more involved and the result is an index of some complexity in which it is known that there are certain inconsistencies and perhaps some errors but it has been checked as far as possible by a number of competent botanists, whose help is gratefully acknowledged. As many plants have been figured under names current at the time but now obsolete or obsolescent, Mr. Chittenden aimed at nomenclatural exactitude. Thus the Winter Aconite, figured in 1787 (plate 3) as *Helleborus hyemalis*, then its accepted name, has been known for over a hundred years as *Eranthis hyemalis* and nowadays no one but a botanist would think of looking for an illustration under any other name. Sometimes the name used in the *Magazine* has been superseded by a prior name for the same plant, e.g., the plant figured on plate 216 (1793) as *Cypripedium album* is now better known under the earlier name *C. Reginae*; sometimes the name used has had to be discarded as a later homonym, e.g., the name *Clerodendrum foetidum* of Bunge (1832) used for plate 4886 (1855), being published later than *C. foetidum* of D. Don (1825), has been replaced by *C. bungei*. Occasionally the plant figured has been wrongly identified; thus the plant depicted in plate 170 (1791) as *Draba aizoides* is now considered to represent another species, *D. brachystemon*. From these examples it will be evident that the inclusion in the index of only the names quoted in the *Magazine* would result in many good plates under obsolete names being overlooked. It was decided, therefore, that all names deemed correct at the time of compiling the index should be included, whether used in the original text or not. In

LONDON AND COLCHESTER

addition to revising much of the earlier nomenclature, Mr. W. T. Stearn, while Lindley Librarian, drew up a table giving dates of publication (printed on p. 270) and also, with the help of Mr. J. Robert Sealy of the Royal Botanic Gardens, Kew, completed the chapter on the history of the *Botanical Magazine* from the year 1920. This history reveals how, despite many difficulties, a succession of distinguished botanists, gardeners and botanical artists by their joint efforts over one hundred and sixty years have succeeded in maintaining the *Botanical Magazine* at a high level of excellence. Its utility in making known new and little known plants by means of good coloured plates and detailed descriptions is as great today as it has ever been. Clearly the *Botanical Magazine* is an indispensable reference source for botanists and gardeners alike and it is hoped that this index will enable them to make fuller use of this invaluable work.

D. BOWES-LYON,
President.

INDEX TO THE
BOTANICAL MAGAZINE

VOLUME 1 to VOLUME 164

THE following Index gives references to all plates and plant names contained in the *Botanical Magazine* from its commencement in 1787 with Plate 1 to the end of Vol. 164 with Plate 9688 which appeared in 1948.

All the numerical references are to plate numbers.

1. All names in bold type are those of plants, figured in the Magazine, which appear to be agreeable to the taxonomic ideas generally prevailing and the Rules of Botanical Nomenclature in force at the time this Index was prepared, and the numbers in bold type give the plates on which these plants are figured. Thus

Abelia floribunda, 4316

indicates that Plate 4316 figures *Abelia floribunda*.

These names may differ from those attached to the plate when it was published either (1) because the plant depicted was wrongly identified at that time; (2) because later botanical study has shown that the relationships of the plant are not in fact such as were indicated by the name originally chosen, that is taxonomic ideas have changed regarding it; or (3) the name then given is not in accordance with the present Rules of Botanical Nomenclature. Where it has been necessary to change a name, this is indicated by an asterisk preceding the name or the plate number. Thus

Abelia Schumannii, *8810

indicates that the correct name of the plant depicted on Plate 8810 is *Abelia Schumannii* and that the name differs from that given on the plate.

Abelia ***longituba, 8810*** **= *Abelia Schumannii**

indicates that the plant named *Abelia longituba* on Plate 8810 is now called *A. Schumannii*.

2. Names and references in italics indicate that the name has been used in the Magazine as a synonym for the plant now known by the name given in bold type. Thus

Abelia ***serrata, 4694*** **= A. uniflora**

was given as a synonym of *Abelia uniflora* figured on Plate 4694.

If the name in bold type is preceded by an asterisk thus

Abelia ***longituba, 8810*** **= *Abelia Schumannii**

this indicates that the name *A. longituba* of the *Botanical Magazine* is a synonym of *A. Schumannii*.

It should be pointed out that a particular combination of a generic name with a specific epithet quoted in the Magazine as a synonym and

therefore so indicated in the Index, is not to be regarded as always a synonym of the plant figured. A mistake may have been made by the author in considering the two names synonymous, or the same combination may have been used for two or more distinct species. Several instances of the latter are indicated in the Index. Thus

Acacia *Cycnorum, 4588* = **Acacia pulchella hispidissima**

but

Acacia *Cycnorum, 4653* = ***Acacia obscura**

the name *Acacia Cycnorum* having been given to two distinct species of Acacia.

3. Names and references in roman type indicate plants referred to in the text only, but not figured on the plate referred to. Thus

Abelia angustifolia, 9131

is a name mentioned in the notes attached to the Plate 9131 on which *A. triflora* is depicted. (Here both specific epithet and plate reference are in roman characters.)

Abelia *serrata*, 6601

indicates that *A. serrata* which is a synonym of another species is referred to also in the text of Plate 6601 which depicts *A. spathulata*.

4. It may be that in some instances the same combination of generic name and specific epithet occurs as the authentic name of a plant figured, as a synonym of some other plant, or is mentioned in the text relating to another species. This is indicated by the type. Thus

Abelia *serrata, 4694*, 6601 = **A. uniflora**

indicates that *A. serrata* is given as a synonym of *A. uniflora* on Plate 4694, and is also mentioned in the notes on Plate 6601. This does not necessarily mean that the same plant is referred to in the two references, though it usually will have this meaning. As a rule the text will make the identity or difference clear, but in some instances, e.g., in the genus Crinum, it is sometimes difficult to ascertain the plant actually referred to as usage and specific concepts varied from time to time.

Abelia uniflora, 4694, 6601, 8810

indicates that Plate 4694 depicts *Abelia uniflora* and that this name also occurs in the text of Plates 6601 and 8810.

5. Where a name in the Index consists of three words, except in pre-Linnean names, the third is that of a variety of the species named, the usual contraction " var." being omitted to economize space. Thus

Picea jezoensis hondoensis,

means the variety *hondoensis* of *Picea jezoensis*.

HISTORY OF
CURTIS'S BOTANICAL MAGAZINE

THE first number of Curtis's *Botanical Magazine* was issued on February 1, 1787. It was an octavo with paper covers and was priced at 1s. It consisted of three hand-coloured plates numbered consecutively and representing *Iris persica, Echinacea purpurea* and *Eranthis hyemalis*, the winter aconite now naturalized in Britain but then much less common. Each plate was accompanied by letterpress. In this form the Magazine appeared regularly on the first of every month during the life of its founder, and substantially in this form and under the same name it has been continued until the present day. The year 1948 saw the publication of the last part of volume 164, the last volume with hand-coloured plates, the last plate being numbered 9688. The publication still continues though the method of colouring the plates has now been changed and with that change in volume 165 for 1948 a new series of plate numbers began.

The early history of the Magazine has been told several times and perhaps most completely by W. Botting Hemsley, F.R.S., in a series of articles in the *Gardeners' Chronicle* for 1887. This account was accompanied by an interesting and valuable review of the rise and progress of flower-growing in the open and under glass in Great Britain up to that date and an account of the various books and publications containing representations of plants published here from the sixteenth century onward. These were gathered together and prefixed to *A New and Complete Index to the Botanical Magazine from its commencement in 1787 to the end of 1904 including the First, Second and Third Series* by W. Botting Hemsley, published by Messrs. Lovell Reeve & Co. 1906. It may be noted here that there have been five Series so-called, coinciding in part with change of editorship, the First Series embracing volumes 1–42, a "New" Series volumes 43–53, a second "New" Series volumes 54–70, a Third Series volumes 71–130, Fourth Series volumes 131–146. From volume 147 onwards the volumes were not placed in a Series. Besides the numerical position in the Series the volumes were numbered as part of the whole publication, thus volume 60 of the Third Series was also volume 130 of the entire work so that continuity of publication was made evident, and furthermore the numbering of the plates was continuous all through from the beginning to plate 9688, making reference to the plates easy. The avowed purpose of creating a new Series was that people might be more likely to begin a subscription to the Magazine at such a point who would otherwise be deterred because they might be unable to obtain the earlier volumes, though the earliest volumes are by no means difficult to secure. As a matter of fact the Magazine may be conveniently begun at any point, for the plates and text do not depend for their interest and intrinsic value upon those that have appeared before. Each plate with its accompanying text is complete in itself.

Hemsley's Index is not the only one published. An index to the plates in the first ten volumes was included in volume 10, and this besides the names in alphabetical sequence included a classified list of hardy trees, shrubs, herbaceous perennials, biennials and annuals; an index of greenhouse plants and one of stove plants, as well as an index arranged according to the Linnean system. A second general index appeared at the completion of volume 20 and gave an alphabetical Latin index, an alphabetical English index, an enumeration of the plants figured in order of publication, with corrections and additional remarks and an arrangement of the plants according to the Linnean system. The corrections and additions formed a valuable supplement to the Magazine, and in a somewhat different arrangement and with the omission of certain matters they were included in a third general index which appeared after volume 42 (1815) ending the First Series. An engraved portrait of William Curtis, dated 1800, accompanied both the second and third indexes. The fourth index already referred to gave the names of plants, figures and many of their synonyms in alphabetical order but without the corrections and additions such as were in the third general index. The third index contained much matter concerning the origin and progress of the Magazine, and to it and to Hemsley's history we are indebted for much of what follows concerning the Magazine during the first hundred years of its existence.

No attempt has been made to include here, as Hemsley so ably did, references to other literature bearing on the development of flower-growing in the British Isles. To tell the story of that phase of British cultural progress it would be necessary to go outside the scope of the *Botanical Magazine* for the plants therein described and discussed are, in all but a very few instances, those that have been introduced from the wild, not those that have subsequently been raised by hybridization or altered after long-continued propagation in our gardens.

All that can be attempted here is to give some account of the Magazine itself with notes on its origin, editors and illustrators, and on the modifications in its make-up which have occurred from time to time during its period of unbroken vitality which has far exceeded that of any other illustrated serial devoted to a similar subject. From time to time rivals and imitators, and even blatant plagiarists, have appeared and lived for a while, but the Magazine has long outlived them and now the few of recent origin are to be looked on as collaborators in spreading the knowledge of plants, rather than as rivals; particular reference to these is, however, outside the scope and purpose of this history.

We have already referred to the commendable manner of carrying through the numbering of the volumes (a practice being continued with the most recent series), and of the plates, and it is only right to commend the practice of retaining a page of the same size (within very small bounds) all through the 164 volumes. There are few things more annoying in a library than to find consecutive volumes of a series differing in height or differing much in width. The producers of the *Botanical Magazine* have been at pains to avoid this. There is one exception which may be mentioned here but which does not affect the general run of the Magazine, which is of octavo size. With the beginning of the second "New" Series (volume 54) a quarto edition was

prepared and advertised at the instigation of Sir William Hooker who desired to have the large plates bound so that they were not folded. The demand for this format was, however, very small indeed and it is said that only six copies of any issue were actually made and these were soon reduced to three which continued for a time. One of these quarto sets of the second "New" Series, volumes 54 to 70 (1827–44) belonged to W. H. Fitch, whose work will be referred to later, and eventually went to America. So far as can be ascertained only one copy of the volumes of the Third Series, volumes 71–130 (1845–1904) was produced and this joined the quarto copy of the Second Series in the library of Sir William Hooker and after his death in 1865 was continued for Sir Joseph Hooker. At his death in 1904 when the Fourth Series, volumes 131–146 (1905–1920), was begun the quarto issue came to an end. It had the great advantage not only of displaying the "double plates" without folding, but the large margins set off the smaller plates to greater advantage, and in addition the plates were specially coloured. The cost of producing the large paper copy was, however, considerably higher and this weighed heavily against its continued issue. In 1904 after Sir Joseph Hooker's death the quarto issues of the Second and Third Series passed to Sir W. Thiselton-Dyer, his son-in-law, and then by purchase in 1906 to Henry Elwes of Colesborne. In 1949 it was acquired by the Lindley Library Trustees and the unique run of 87 quarto volumes is now among the treasured possessions of the Lindley Library at Vincent Square, Westminster.

William Curtis the founder of the Magazine tells us, in the preface to the first volume, that it owed its appearance to the repeated solicitations of several ladies and gentlemen, subscribers to the founder's Botanic Garden, of which more below. Foremost among these was Robert Barclay (1751–1830), one of the founders of the Linnean Society of London, then residing at Clapham, whence he removed, in 1805, to Bury Hill, Dorking, where he established and developed a great garden which in time provided many plants for figuring in the Magazine. Curtis was fortunate in the time of starting the venture, for interest in plants and desire for knowledge of them had spread widely, and the project was well conceived, both in its contents, its format, and its price. It succeeded "beyond the author's warmest expectations." It is said that three thousand copies of the Magazine were sold and this circulation was maintained during the author's life.

The publication of coloured plates of plants and information about them was no new thing for the founder of the Magazine to undertake. In 1777 he had begun the issue in parts of the folio *Flora Londinensis; or Plates and Descriptions of such Plants as grow in the Environs of London*. This, with its fine plates, was continued until 1787 but did not greatly appeal to the public and proved a source of great financial loss to its author, who later more than retrieved his fallen fortunes by the Magazine. This fine Flora was later considerably extended and a new edition of the whole published by Sir William Hooker between 1817 and 1828.

William Curtis was born at Alton, Hants, in 1746, the son of a master tanner of that town, and a member of the Society of Friends. He went to school in the neighbouring village of Holybourne. At the age of 14 he was apprenticed to his grandfather, an apothecary of

Alton, and in 1766, on the expiration of his apprenticeship entered the service of Mr. Talwyn, apothecary of Gracechurch Street, London. In due course he succeeded to that business but his heart was not in it. He had acquired a taste for natural history, fostered it is said, or even kindled, by one of those amateur naturalists who, in this island's story, have done so much to extend knowledge of its plants and animals of all kinds. Henry Field, in his *Memoirs, historical and illustrative, of the Botanick Garden at Chelsea*, 1890, tells us that it was James Lagg, the ostler at the inn adjoining his father's house, who fired the love of natural history in young William, and we have it, on the authority of J. Smith in *Rees' Cyclopaedia* that Lagg had excellent knowledge of Gerard's and Parkinson's writings and so was able to awake in William Curtis the desire for knowledge that never left him. Once set on the path William Curtis followed it to the neglect, it is to be feared, of his business but to the lasting benefit of that section of mankind whose delight it is to study and gain knowledge of plants. Soon after he became master of the Gracechurch Street business he took a partner so as to have more leisure for the study of plants. His partner was apparently like-minded with himself, for he appears to have accompanied him on many of his herborizations and to have corresponded with him on the subject after the partnership was severed, as it was before very long, for William desired still more leisure to follow his bent and sold out his share of the business to his partner. He then felt free to devote himself wholly to the studies to which he was inclined and not only did he search diligently the environs of London for plants but bought a small plot of ground in Bermondsey on which to grow plants, becoming not only a naturalist but a gardener. In 1773 he was appointed Praefectus Horti and Demonstrator to the Society of Apothecaries at Chelsea, following William Hudson, author of *Flora Anglica*, who resigned that office in 1771, and the benefactor and honorary Demonstrator in the garden, Stanesby Alchorne, who had acted during the interval before Curtis took up the appointment. During the five years he held the office he put forward a scheme for the delivery of a course of botanical lectures in the garden especially for medical students. This was approved, but never implemented ; the idea was, however, to be fruitful.

William Curtis had already, in 1771, published *Instructions for collecting and preserving Insects*, and in 1772, his translation of Linnaeus's *Fundamenta Entomologiae* which he also illustrated, and now in 1774 came his *Catalogue of Plants growing wild in the Environs of London*. He held his Chelsea appointment for about five years and then resigned, for he found that his botanical activities required most of his time, and started a Botanic Garden where he could give public lectures and demonstrations in Botany and Horticulture. Particulars of this venture will be found in *Proposals for opening the London Botanic Garden*, 1778. He acquired land for the purpose in Lambeth Marsh, somewhere between Westminster Bridge and the site of Waterloo Station, whence the early plates of the *Botanical Magazine* up to March 1790 are dated. It was probably about that time that the garden was removed to a more commodious and more salubrious site at Brompton where Curtis maintained it until his death. Admission to the garden

and to his lectures, which attracted large audiences, was by an annual subscription of one guinea. A subscription of two guineas entitled the subscriber to a share in the plants and seeds as they became available for distribution each year. The garden was divided into parts containing respectively medicinal, culinary, poisonous, agricultural, and British plants and hardy ornamental flowers and shrubs, mainly exotic, and beds were arranged illustrating the Linnean system of classification. Each subscriber was provided with a catalogue of the plants cultivated, about 6,000 in number. Some of the catalogues are in the Lindley Library : one dated 1783 is *A Catalogue of Plants . . . cultivated in the London Botanic Garden*, another dated 1803, *A Catalogue of the Brompton Botanic Garden, Hardy Plants*. Curtis was helped in the development of his Botanic Garden by contributions from the Royal Gardens at Kew, the Earl of Bute's Garden at Luton, Dr. Fothergill's at Upton, Dr. Pitcairn's at Islington, and by the Earl of Plymouth, Sir Joseph Banks, the Rev. J. Lightfoot, the Rev. Dr. Goodenough and many others, including prominent nurserymen, of whom perhaps the best known was Loddiges of Clapton, who later produced the *Botanical Cabinet* (1817–1833) with coloured figures of 2,000 ornamental plants. The lectures which Curtis gave were not published during his lifetime, but after his death his son-in-law, Samuel Curtis, published them in 1805 as *Lectures on Botany as delivered in the Botanic Garden at Lambeth* in three handsomely illustrated volumes, a second edition of which appeared in 1807. William Curtis himself had published a quarto *History of the Brown-tail Moth* in 1782, and *Practical Observations on the British Grasses* with coloured plates, of which several editions appeared.

William Curtis had thus a sound basis on which to build when he started the *Botanical Magazine*. In a sense his whole life had led up to its production. Exactly when the idea was conceived is not known. The first six plates in volume 1 are dated 1786, but so far as is known none was published until February 1787, and the date on the plate no doubt indicates either the year in which the plant was drawn, or that in which the plate was engraved. As will be seen from the Table (p. 270) showing the year of publication of the plates (for which I have to thank Mr. W. T. Stearn, sometime Librarian, Lindley Library), the volumes did not correspond with the calendar years but at first they ran from February of one year to January of the next, and the date on the title page of the volume was that in which the volume was begun.

The *Botanical Magazine* set out to be a " Display of the Flower Garden of ornamental Foreign plants cultivated in the open ground, the greenhouse and the stove . . . accurately represented in their natural colours," to quote the title page of volume 1. To make such a " display " entailed not only artistic skill but accurate knowledge of the plants depicted and Curtis had both. He was no doubt a skilful draughtsman but whether he actually drew any of the plants illustrated is doubtful, for Samuel Curtis says that his father-in-law could not draw sufficiently well for the Magazine. However that may be, he enlisted skilful aid and more than that, hearing, through Mr. Denman, Town Clerk of Southampton, of a youth, Sydenham Edwards, son of a Welsh schoolmaster, who showed ability in depicting plants, had him brought to London to be trained as an artist. He proved an

apt pupil and became one of the most skilful delineators of plants England has produced. His work appeared not only in the *Botanical Magazine* but in several other publications over a long period. Curtis must have felt great satisfaction in having trained him so satisfactorily. His connexion with the Magazine as the sole regular artist continued until 1815, and it was a sad day for the Magazine when, through some misunderstanding, the connexion was severed. Edwards died in 1822, and we have the evidence of Samuel Curtis, then proprietor of the Magazine, that before his death, he regretted his severance with the Magazine, as all connected with it must have done. So active had he been that an editorial note in the Kew copy of the Magazine following plate 1232 states that with the exception of 67 plates drawn by J. Sowerby and 8 by Mr. Sansom, all up to that date (1809) were the work of Sydenham Edwards, even 12 of the plates bearing J. Sowerby's name having been drawn by Edwards. Sydenham Edwards proved eminently capable of producing drawings suitable for a work of this kind. His drawings are pleasing pictures of the plants, accurate in form, so that specific characters are usually clearly seen in spite of the absence of analytical drawings, and clear in colouring. Curtis was fortunate in his artist; he was equally fortunate in his engraver and his colourist.

Up to the end of volume 70 the plates were engraved on copper and at first Edwards engraved his drawings himself, but from plate 191 Sansom's name appears on many of the plates and later, up to volume 42 most of the engraving was done by him. William Graves was the colourist and his work followed Edwards's pattern faithfully both in the simple colour washes that Edwards so largely depended upon and in the intricate patterns and delicate shadings which are often found in the flowers. Even now, after 150 years his colouring is true and fresh for the most part, only when lead pigments had been used for the whites and some of the reds has the colour suffered to any serious extent.

The choice of plants to figure lay, of course, with the editor and he had a rich field, even then, from which to draw. The public desire to obtain uncommon plants was keen, and among his wide acquaintances of like mind with himself there was little difficulty in finding "ornamental Foreign Plants" which were not very generally known, many of which had never been figured in accessible books. At first his choice fell upon plants of European origin, mostly (i.e. about one-third) from Mediterranean or alpine districts, while the Orient provided about one-fifth, the remainder being drawn from North and South America and from South Africa. As time passed the proportions from various regions of the world underwent, as will become evident, very considerable change.

The text for the early volumes was much shorter than was considered desirable later on, but it gave for each plate :—

1. The name of the plant and its place in the Linnean System of classification;
2. The generic and specific diagnoses;
3. Names used by other authors for the plant depicted, i.e. synonyms, sometimes including those used by pre-Linnean authors;
4. The native country;

5. The time of flowering;
6. Notes on cultivation.

In addition to the name of the plant as known to science, an "English" name was given and this practice was continued down to plate 5877. A few, a very few, of these names were genuine English names; most were either translations of the scientific name (and as such were possibly of some value to those who had no Latin or Greek), or they were arbitrary names coined for the purpose. The last type of name, such, for example, as "Linden's Erythrochiton," serves no useful purpose and it is safe to say that very few of such names ever became "English" names in the proper sense of the word and the practice was discontinued, regretted by few, from volume 97 onwards.

Apart from this the general plan adopted for the text has been continued ever since with those modifications which passing time has indicated as necessary. Thus, the Linnean System of Classification was used exclusively until the end of 1840, when it shared its place with the Natural System of the French School until 1870. The French system in its turn gave place to the System of Bentham and Hooker, and this in recent years, at least in part, to Engler's System. The descriptions have become longer and more exact and the history of the species figured and sometimes of its congeners has been more fully set out, but in principle, the text of the Magazine, and the illustrations, which now give in addition enlarged dissections of the smaller parts, conform to William Curtis's conception of the purpose the Magazine should fulfil and the way this could best be attained.

William Curtis died in July 1799, leaving one daughter who married Samuel Curtis, a first cousin of William's, to whom the copyright of the Magazine passed. Apparently, according to a note in the Kew copy of the Magazine, Thomas Curtis, one of William Curtis's three brothers, conducted the Magazine from plate 450 until Dr. Sims became editor, in which capacity his name first appeared on the title page of volume 15, 1801. Dr. John Sims, one of William Curtis's executors, was a native of Canterbury and practised in London. Born in 1749, he studied in 1773–4 at Leyden, returning to Edinburgh where he took the degree of Doctor of Medicine in 1774. He was admitted a Licentiate of the College of Physicians in 1779 and attained some prominence in his profession. His editorship lasted from 1801 to 1826. He died in 1831 at the age of 82.

Samuel Curtis, who now comes into the picture as proprietor and conductor of the Magazine, was born at Walworth, Surrey, in 1779, the son of James Curtis, surgeon and apothecary. He had a nursery at Walworth at the beginning of the nineteenth century and later, in 1808, went to live at Glazenwood, near Braintree in Essex, where he had a large garden (*see* JOURNAL R.H.S. **58,** p. 324). His name first appears on the plates in January 1811 and his connexion with the Magazine continued until 1846 when he sold his rights to Messrs. Lovell Reeve & Co., of Henrietta Street, Covent Garden. Samuel Curtis died at La Claire, Jersey, where he made a garden and lived in retirement till 1860.

In a short preface to volume 15, the new editor, Dr. Sims, explains that little use had latterly been made of the materials left by Curtis. Among other reasons he had the "wish to indulge our botanical

readers with a representation and description of some of the novel and curious plants which are annually introduced, particularly from the Cape of Good Hope." He acknowledges gratefully the assistance he had received, and anticipated, from John Bellenden Gawler (afterwards John Bellenden Ker) who made a special study of the Iridaceae which are so largely represented in South Africa ; William Herbert and R. A. Salisbury also about this time, and indeed during the greater part of Dr. Sims's editorship, were active students of the Amaryllidaceae and Liliaceae, and as a result a large number of bulbous plants were figured in the Magazine. Attention was also turned to the great number of Heaths which became favourite greenhouse plants about this time. Of over 50 species of Cape Heaths figured in the Magazine the great majority appeared during this period. The proportion of bulbous plants, which in volume 16 constitutes two-thirds of the plates and in the succeeding four volumes about one-half, fell off after volume 20 and representatives of a few kinds of plants which were later to become very numerous began to appear. Epiphytic Orchids were represented by only 8 plates out of the first 1,000, *Epidendrum fragrans*, plate 152, being the first, the first Oncidium (*O. carthaginense*) appearing on plate 777 and the first Brassavola (*B. cucullata*) on plate 543. Rhododendrons appeared during the same period on only three plates, *R. ponticum*, now so abundant, being deemed worthy of a figure on plate 650. Chinese Primulas were not represented at all until considerably later. The only Cactus figured during the same period was *Aporocactus flagelliformis*, but the many beautiful hard-wooded plants of Australia began to make their appearance, the first Epacris being figured on plate 844.

Meanwhile a change had taken place in the Magazine which had at first three plates to a part. This was increased in volume 15 to four plates to a part and in volume 16 to eight plates to a part, and from then until the end of the First Series with volume 42, two volumes appeared each year with 42 to 48 plates in each (see Table, p. 270). The price of a part was also increased, and at first this made little difference in the circulation, but the loss of the valuable assistance of Sydenham Edwards who was almost the sole artist up to 1815, and the establishment of the *Botanical Register* by him, to say nothing of the competition of several other periodicals with coloured plates of flowers, hit the Magazine very hard. The number of subscribers fell off very considerably during the next ten years, until by the end of volume 53 it was, Samuel Curtis tells us, fewer than 1,000. No doubt the nature of the plants selected contributed to this reduction, for some of them were of more botanical than horticultural interest or lacked novelty, and there can be little doubt that both editor and publisher had to work under difficulties.

With volume 43 the number of plates was doubled and their publication spread over twelve months. Towards the end of volume 46 the name of a new artist, J. Curtis, appears, and he continued to furnish drawings for the Magazine until nearly the end of volume 53. He was apparently no relation to the founder of the Magazine and his work, of course, lacked experience and was of unequal merit, but fortunately other artists contributed drawings during this period. At this

time use was also made of several plates prepared by Sydenham Edwards early in the century, and also one or two made by J. Sowerby, including one, *Hesperis grandiflora*, on plate 2683 near the end of volume 53. Among others, plates were contributed by different members of the Curtis family including Samuel's daughter, A. C. Curtis, by Herbert, R. K. Greville, and E. Duncombe. Herbert's contributions during this period are noteworthy, and besides his articles and drawings in the *Botanical Magazine* itself he wrote a " Botanical Arrangement of the Plants hitherto included under the Genera Amaryllis, Cyrtanthus, Crinum and Pancratium with general observations and directions for their cultivation," which contained two coloured and two uncoloured plates and in the same wrapper, dated 1821, a general index to the six volumes of the second Series of the *Botanical Magazine*. This was published by James Ridgway and was intended to be bound up with the *Botanical Magazine* and the *Botanical Register*. It forms an Appendix to volume 48 of the Magazine.

Though not actually connected with the *Botanical Magazine* a magnificent series of five large folio plates depicting varieties of *Camellia japonica* was published in 1819 as *A Monograph of the Genus Camellia* by Samuel Curtis. Each plate showed several varieties drawn by Clara Maria Pope. This followed a series entitled *Beauties of Flora* begun in 1806, drawn by Thomas Baxter and later by Clara Maria Pope, some, perhaps all, from specimens in Samuel Curtis's Walworth or Glazenwood garden. The first showed Tulips, then followed Carnations, Ranunculus, Hyacinths, Anemones, Auriculas, Pinks, Polyanthus, all popular florists' flowers of the period. Two of Dahlias are of particular historical interest as they exhibit the types available near the beginning of the reign of popularity these flowers have enjoyed. Whether many of these plates were produced is uncertain ; some of them are bound up in some copies of the Camellia Monograph, but some are very rare. There is a complete set so bound in the library of the British Museum with a title page, different in some ways from the original of 1806, dated 1820 and published by " S. Curtis, Gamston, Notts. 1820." It is sad that the *Botanical Magazine* plates, from various causes, fell short of these fine plates, and its circulation went down. It was not that interest in horticulture had waned. On the contrary, the Horticultural Society of London had been formed in 1804 and was gaining way. It had started a garden of its own which became established at Chiswick in 1821 and as the country had more or less settled down after the Napoleonic wars collectors had been sent in search of plants to various parts of the world. There was almost a deluge of new plants reaching England after Sir Joseph Banks, Solander and Menzies had shown the way at the latter end of the eighteenth century. The great botanist, Robert Brown, and a little later Allan Cunningham and Charles Fraser introduced many plants from Australia, James Bowie from Brazil and the Cape of Good Hope, G. Don from West Africa, J. Forbes from East Africa, J. Potts and J. Parks from China and Brazil, J. MacRae from the Sandwich Islands, and David Douglas from North America, especially the almost unknown west. There were not only numbers but there was also great variety from which to select, but it was not until after Dr. Sims had retired and William Jackson

Hooker joined with Samuel Curtis in the editorship of the Magazine that these rich sources were effectively used. The first appearance of Sir William Hooker in the Magazine is with plate 2689, and here began his long connexion with it only broken by his death in August 1865 at the age of 80.

Sir William Hooker had already attained a great reputation as a botanist of outstanding ability. He came to the editorship as an experienced author on exotic plants, for in 1822 he had founded a serial, *Exotic Flora*, not very dissimilar from the *Botanical Magazine* itself, which had by then run a course of four years. Now he discontinued that publication and gave his attention to the old Magazine of which he was for the first ten years not only editor but artist as well. He had no easy task to revive the fallen fortunes of the Magazine, but his ability as a botanist and artist, his character and energy, his position as Professor of Botany at Glasgow, with its botanic garden, and the co-operation of garden-lovers through the British Islands, gave him opportunities which perhaps only John Lindley among his contemporaries approached. Lindley was closely identified with the *Botanical Register* and the Royal Horticultural Society and with numerous other activities. Hooker very quickly made his unequalled powers as a botanical draughtsman felt. He had a style of his own and was able to enlist the services of colourists of ability no longer met with at the present day. The importance of the latter can scarcely be overestimated when it is remembered that they have to copy as nearly as may be the colouring of the original drawings from which the plates were prepared. They must needs have ability but little liberty of treatment, and this may be very irksome when several hundred, perhaps thousands, of copies of the same plate have to be made following the lines of the engraving. With volume 54 Hooker introduced some innovations. The number of plates comprising the volume remained approximately the same, but except for volumes 65 to 70 their issue took place within a calendar year, the first under his editorship appearing in 1827; several of the plates were double the size of the earlier ones and had to be folded; the plates contained enlarged details making the points of specific differences more evident. Several illustrations of important economic plants not in cultivation in the British Islands are scattered through the volumes about this time from drawings supplied especially by Charles Telfair of the Mauritius Botanic Garden and the Rev. R. Guilding of St. Vincent, but these are exceptional; the original conception of what should be included in the Magazine was generally adhered to, and indeed several of these exceptional plants have been subsequently grown in England. Finally Hooker introduced the custom of dedicating each volume as it appeared to someone eminent in promoting the mission to which the Magazine is devoted. This innovation became a custom followed to the present day. It is interesting to see that the first of these dedications in the volume 54 was to the Mr. Robert Barclay of Bury Hill, who was one of those who forty years before had urged and assisted William Curtis to launch the Magazine.

A list of the persons to whom the succeeding volumes were dedicated is given in the Table on p. 274, and in 1932 a volume compiled by William Cuthbertson with the assistance of Ernest Nelmes of Kew,

giving 99 portraits and notes on these persons, entitled *Curtis's Botanical Magazine Dedications, 1827–1927*, was published by Messrs. Bernard Quaritch. It is uniform in size with the Magazine, and portraits of those honoured in this way subsequent to 1927 accompany the dedication in each volume of the Magazine.

In 1841 William Hooker became Director of the Royal Botanic Gardens, Kew, but though the editor now had the great collections of ornamental plants growing at Kew from which to draw it is not to be supposed that all the plants pictured in the Magazine portrayed plants growing there. In fact, during the whole period of which the successive editors of the Magazine have been officially connected with Kew, the practice begun by William Curtis has been continued of seeking, wherever they were growing in the British Isles, plants suitable for inclusion, and many private gardens have contributed largely as have many of the great nursery firms. As we have seen, the Horticultural Society of London sent out collectors into little-known parts of the world, and their example was followed by nursery firms like Bull, Veitch and Sander, and then by syndicates of garden-lovers, so that a constant stream, sometimes it is true of small size but often almost a flood, of new plants has reached us. Besides those like David Douglas already mentioned, the names of Thomas and James Drummond, George Ure-Skinner, Wright, Dr. J. D. Hooker, Thwaites, Ronald Gunn, James Gould Veitch, William and Thomas Lobb, Wallich and Hartweg, occur time after time as collectors of plants figured, many of them greenhouse or hot-house plants. Besides these there were many plants introduced by travellers and explorers who were not mainly concerned with the flora of the countries they visited. It was indeed the beginning of the period when epiphytic Orchids were being really successfully grown and many of them were figured in the *Botanical Magazine* as they became available.

In the general index prepared by Samuel Curtis and issued in 1828, it is remarked that some subscribers preferred to bind up the plates that had been issued so as to bring the plants of one natural order together; to meet what was thought to be this desire, a new edition of the Magazine was prepared " with amended characters of the Species, the whole arranged according to the Natural Orders by W. J. Hooker, to which is added the most approved method of Culture by Samuel Curtis." Only one volume was published in 1833, containing 119 plates which had previously appeared in the *Botanical Magazine*, representing plants belonging to the families Ranunculaceae, Dilleniaceae, Anonaceae, Menispermaceae, Berberidaceae, Podophyllaceae, Nymphaeaceae, Papaveraceae and Sarraceniaceae.

W. J. Hooker's widespread duties and interests gradually made it difficult for him to continue the drawing of the plants for the Magazine, and to volume 62 no fewer than eleven artists contributed plates. These included Francis Bauer, one of the most skilled botanical artists, but by this time Hooker had found and engaged a young artist, W. H. Fitch, whose connexion with the Magazine continued until the end of volume 103. His name first appears on plate 3353 in volume 61, but he also drew all the plates which appear without initials in that volume, and subsequently he became practically the sole artist engaged,

contributing in all about 2,800 plates to the Magazine. In volume 61 also occurs the first of the great number of Himalayan Rhododendrons which Dr. J. D. Hooker had discovered, a white form of *R. arboreum*, which was to be followed by others as they gradually reached flowering size in English gardens. These were the precursors of first the Malayan and East Indian species, and then in the nineteenth century of a great spate of species from China and the borders of Tibet, which expanded our concept of the genus and almost revolutionized gardens in mild, lime-free parts of the British Isles. Meanwhile Orchids began to occupy a larger proportion of the plates; twenty were figured in volume 64, and an even larger proportion in the volumes immediately succeeding, and little wonder, for James Bateman of Knypersley Hall, Cheshire, a great amateur of Orchids, estimated that 300 species new to gardens were introduced in 1837, mainly from Guatemala and Mexico. But other plants, both hardy and greenhouse, were not neglected, and not a few are favourites to-day. It is interesting to see the name of William Curtis as the artist of the excellent plate of *Ribes speciosum*, no. 3530. He was the son of Samuel and grandson of the founder.

With volume 65 some irregularity in the issue of the Magazine occurred, the last part not appearing till 1839, and this irregularity was continued until volume 70, only one quarter of which appeared in 1843, the remainder in 1844 a year behind time. In 1845 the copyright of the Magazine was transferred from Samuel Curtis to Messrs. Lovell Reeve who thenceforward published it with great regularity until 1920, a period during which 76 volumes appeared. This ended the connexion of the Curtis family with the Magazine, but the name *Curtis's Botanical Magazine* was retained as it still is. Volume 70 ended the Second "New" Series of the Magazine and the last three volumes of this Series, volumes 68, 69 and 70, are very rare; this was due (according to information supplied to Mr. Soper, a member of the new publishers' firm who was for very long connected with the publishing of the Magazine) to the stock of these volumes having been sold as waste paper. The practice seems to have been to complete the production of the number of copies required to fulfil the demand by subscribers and to keep a stock of the material of both text and uncoloured plates ready to make up to fulfil later requirements. This accounts for a certain amount of variation in the colouring of different copies as the actual colouring was done at different times. It also accounts for the curious appearance of different publication dates on some of the title pages of the very earliest volumes. Volume 1, for instance, bears date of 1787 (the actual date of first publication), 1790 and 1793; volume 2, 1788 and 1796; volume 3, 1789, 1792 and 1797; volume 4, 1790, 1791 and 1795; volume 5, 1791, 1792 and 1796, and volume 6, 1792 and 1793 in different copies. The actual years of publication of the different plates is shown in the Table (p. 270). A facsimile reprint of volume 70 has been produced in Germany.

Besides the difference in publisher the first volume of Series 3, shows two other changes, one on the title page where the woodcut of the Palm House at Kew (then not erected) is first introduced and where it still appears, and then on plate 4174 where the outline of the figure

is lithographed instead of printed from an engraved plate. Lithography either from stone or zinc has been the method of printing ever since that date with the exception of a few plates in volume 147 which were reproduced by colour printing and those in volumes subsequent to 164.

Little change otherwise took place in the Magazine make-up for some time except that J. S. (John Smith) contributed in volumes 75, 76, 77 and part of 78 notes on the cultivation of the plants depicted. John Smith was a member of the garden staff at Kew from 1820 to 1864, being in the latter part of the time curator.

Sir William Hooker continued as editor until his death in 1865 and all this time he had the inestimable advantage of collaboration with W. H. Fitch as illustrator. Numbers of new and even exciting plants were coming in, especially from warm temperate and tropical regions, and many found their way into the *Botanical Magazine*. Only a few can be mentioned. There was *Disa uniflora* (pl. 4073) from S. Africa, *Stephanotis floribunda* (pl. 4058) which was well established in Mrs. Lawrence's garden at Ealing Park by 1843, the handsome species of Aeschynanthus (pl. 4260, 4264, 4320, 4328) from tropical Asia, the amazing *Victoria regia* (pl. 4275–8) from the Amazon, first flowered at Chatsworth in 1849, Allamandas (pl. 4351, 4411, 4594 and a little later pl. 5764), the remarkable *Napoleona imperialis* (pl. 4387) from S. America, *Amherstia nobilis* (pl. 4453), one of the most gorgeous of the Leguminosae which Mrs. Lawrence first flowered in 1849, *Lapageria rosea* (pl. 4447) and its white variety (pl. 4892) from Chile, the *Sobralia macrantha* (pl. 4446), the striking *Angraecum sesquipedale* (pl. 5113), the majestic *Vanda tricolor*, and many other Orchids, the giant Wellingtonia, now so well known (pl. 4777–8), several more Himalayan Rhododendrons, mostly on the border of hardiness of course, but including the beautiful *R. Thomsonii* (pl. 4997), the curious *Aponogeton fenestralis* (pl. 4894) and *A. Berneriana*, then known as Ouvirandra, many Begonias from which eventually numbers of florists' forms have been developed (75 species of Begonia as well as some varieties have been figured in the Magazine), *Coleus Blumei* (pl. 4754), *Kniphofia Uvaria* (pl. 4816, but already inadequately figured as *Tritoma Uvaria* at pl. 758), *Cymbidium giganteum* (pl. 4844), *Coelogyne pandurata* (pl. 5084), *Trichopilia coccinea* (pl. 4857), *Chamaerops elegans* (pl. 4845), *Darwinia macrostegia* (pl. 4858) and *Clianthus Dampieri* (pl. 5051) both Australian, *Nepenthes Veitchii* (pl. 5080), one of the earliest of that curious and physiologically remarkable genus to be cultivated, the gigantic Malayan Orchid *Grammatophyllum speciosum* (pl. 5157), some brilliant Caladiums (pl. 5199 and 5255), *Anthurium Scherzerianum* (pl. 5319) which looks a poor thing beside the remarkable plants that have been developed from it, *Lilium auratum* (pl. 5338) which contemporary literature shows created a great sensation and the desire to scour the world for other Lilies. *Berberidopsis corallina* (pl. 5343) which even now has not taken the place in our gardens that its merits warrant, *Calanthe* × *Veitchii* (pl. 5375), the first of Dominy's hybrid Orchids to be figured by a coloured plate, the curious *Lewisia rediviva* (pl. 5395) which during its rest looks as dead as if it were really a corpse, *Waitzia corymbosa* (pl. 5443), a beautiful and variable "everlasting"

from Australia, raised by Mr. W. Thompson of Ipswich who did so much to make known a great number and variety of plants suitable for cultivation in the open, the curious *Renanthera Lowii* (pl. 5475) which constantly produces two distinct kinds of flowers on the same spike, and *Veronica Hulkeana* (pl. 5484) from New Zealand, the last plant but one to be figured in volume 90, published in 1864.

This volume was the last for which Sir William Hooker was responsible, for his very busy life came to an unexpected end in 1865 in his eighty-first year. This might have been a great catastrophe for the Magazine but he was succeeded by his son Joseph Dalton Hooker as Director of Kew Gardens and also as editor of the Magazine. Sir Joseph Dalton Hooker, as he became, was born in June 1817 and was therefore 48 years of age when he became editor of the Magazine and he continued to act as editor until his health prevented his regular attendance at Kew 40 years after. During all this time the Magazine continued to appear with great regularity, maintained the high standard of interest it had reached during his father's editorship, and on the whole the excellence of its plates. At first the main interest perhaps centred around stove and greenhouse plants and during his period the cultivation of Orchids probably reached its heyday, helped by the continual raising of seedlings and hybrids in British gardens. These, of course, depended, in the first place, upon the wild plants that were introduced. *Cattleya Dowiana*, figured in the first plate in volume 93, must be given a high place. The showy members of the genus Masdevallia began to appear in the same period, e.g. *M. Veitchiana* (pl. 5739), and many other beautiful or curious plants are figured which could be grown only under protection. Mexico and S. America furnished not a few of them, for instance *Passiflora antioquiensis* (pl. 5571), *Begonia boliviensis* (pl. 5657), *Puya alpestris* (pl. 5732), *Fuchsia coccinea* (pl. 5740), *Antigonon leptopus* (pl. 5816). But other warm regions supplied their quota; the singular *Ceropegia soraria* (pl. 5578) from S. Africa with its hinged petals moving with the faintest breath of wind, the curious conifer *Microcachrys tetragona* (pl. 5576) from Tasmania, *Tibouchina semidecandra* (pl. 5721) from Southern Brazil, *Blandfordia Cunninghamii* (pl. 5734) from Australia, *Aristolochia Goldieana* (pl. 5672), *Impatiens Oliveri* (pl. 7960) and *I. Sultani* (pl. 6643) from Africa are among those belonging to this period. This list might suggest that hardy or nearly hardy plants were neglected but this is not so. Many were figured: *Camellia rosiflora* (pl. 5044), the female plant of *Aucuba japonica* (pl. 5512) fruiting now that Fortune had introduced the male plant in 1864, *Hepatica transsilvanica* (pl. 5518), the remarkable *Furcraea longaeva* (pl. 5519), *Yucca Whipplei* (pl. 7662), *Spiraea palmata* (pl. 5726), *Fuchsia procumbens* (pl. 6139), *Lilium sulphureum* (pl. 7722), *L. Hansonii* (pl. 6126), *L. Henryi* (pl. 7177), *L. japonicum* (pl. 6058), *L. neilgherrense* (pl. 6332), *L. Parryi* (pl. 6650), *L. philippinense* (pl. 6250), *L. rubellum* (pl. 7634), *Malus baccata* (pl. 6112), *M. Niedzwetzkyana* (pl. 7975), *M. prunifolia* (pl. 6158), *M. sikkimensis* (pl. 7430) are instances.

Sir Joseph Hooker was an extremely competent botanist and wrote most of the text for the Magazine during his editorship, but he called upon members of the Kew staff from time to time, more especially

J. G. Baker, who wrote many of the articles dealing with the petaloid Monocotyledons of which he made a special study. The last two volumes of the Series, 129 and 130, were produced with the assistance of W. Botting Hemsley, who succeeded J. G. Baker as Keeper of the Herbarium.

Hooker made a departure in volume 97 from the plan hitherto followed by dropping the so-called " English names," which, as already pointed out, served no useful purpose and were not infrequently misleading; from plate 5878 they no longer appear. Apart from this the form of the Magazine underwent little change, but 1878 brought a great difficulty which was not readily overcome. W. H. Fitch, who had so long and successfully provided the drawings and made the lithographs for the plates, severed his connexion with the Magazine. It is, of course, imperative that the artist should live near the source of the plant to be figured and though there were, and are, many competent painters of flowers, few were familiar with the peculiar requirements necessary for making drawings suitable for reproduction in the Magazine or the necessary knowledge to be able to display anatomical details, and fewer still lived near Kew. Fortunately J. N. Fitch, a nephew of W. H. Fitch, was available as a lithographer and he undertook this part of the work, continuing it for the remainder of Sir Joseph's editorship. Several different artists now undertook the drawings for the Magazine: in volume 104 there are drawings by no fewer than seven. Most of them were provided by a daughter of Sir Joseph's, Mrs. (later Lady) Thiselton-Dyer; three were by Miss Matilda Smith, who was becoming a competent draughtsman under Sir Joseph's tuition. Mrs. Thiselton-Dyer was the principal artist for Volume 105 also, but Miss M. Smith and various other persons, including Mrs. A. Barnard, a sister of the late Mrs. J. D. Hooker, and daughter of the late Rev. Professor Henslow, contributed the remainder. Most of the drawings in the succeeding volumes were contributed by the ladies named, but Miss Smith gradually contributed more until, by volume 113, she made all the drawings and had become practically sole artist for the Magazine. Except for about half a dozen drawings by Lady Thiselton-Dyer, Miss Smith contributed all till the Third Series came to an end with volume 130 and the editorship of the Magazine passed from Sir Joseph Hooker into other hands. While her drawings lacked in a measure the beauty of most of those provided by Sydenham Edwards and the freedom of W. H. Fitch's work, they were competent for the botanical purposes of the Magazine and showed accurately the details of structure upon which the taxonomical position of the plant figured depended. Fashions in gardening were changing as the nineteenth century drew to a close, not violently but perceptibly. The herbaceous border was occupying a greater place, the cultivation of alpine plants and the making of naturalistic rock-gardens were beginning their long reign, the naturalizing of exotic plants was receiving greater attention, resulting in such " wild gardens " as G. F. Wilson's at Wisley, and particular heed was being paid to the ascertainment of hardiness among the plants that wider travel and exploration were making known to botany and horticulture. The gradual opening of Japan and China, the plants of which were hitherto known almost exclusively from what could be obtained

from the gardens of the treaty ports and the immediate country around them, made possible the tapping of the vast flora of temperate or near temperate regions, of a richness undreamed of. One genus will serve to illustrate the change that was coming over the public taste fostered by the interest these new explorations had aroused. Up to volume 130, just over thirty species of Primula had been figured in the Magazine: from volume 131 to 164 no fewer than sixty new species, almost entirely Chinese or Japanese, were added.

All this naturally has its effect upon the general contents of the *Botanical Magazine* and so had the gradual increase in the use of ornamental shrubs and trees, the number of species available having been greatly augmented by the explorations of Henry, Wilson, Forrest, Farrer, Ward, Rock and others in inland China, northern Burma and the marches of Tibet. No genus of shrubs has been so greatly enlarged by these explorations as Rhododendron, and it is not surprising that of the 1,700 plates published in volumes 131 to 164, 138 represent Rhododendrons.

When Sir Joseph Hooker retired from the Directorship of the Royal Botanic Gardens, Kew, he was succeeded by his son-in-law, Sir William Turner Thiselton-Dyer, and now when he relinquished the editorship of the Magazine in 1904, Sir William Thiselton-Dyer accepted the duty and became editor of the next two volumes, 131 and 132, which appeared in 1905 and 1906. During his editorship Thiselton-Dyer continued the form and general make-up of the Magazine except that with volume 131 a new Series (IV) began which continued up to volume 164. Miss Matilda Smith continued as artist, and J. N. Fitch as lithographer, the publishing being still in the hands of Messrs. Lovell Reeve & Co. While Sir Joseph Hooker had contributed the greater part of the text during his editorship, from volume 131 the descriptions and notes have been contributed and signed by various authors, mostly members of the staff of the Royal Botanic Gardens, to whom therefore the authorship of any new names proposed in the Magazine is to be attributed.

On the retirement of Thiselton-Dyer from Kew in 1906, his successor as Director, Sir David Prain, became Editor of the Magazine and was responsible for volumes 133 to 146 (1907 to 1920).

The *Botanical Magazine* had weathered the difficulties of the Napoleonic Wars better than some other illustrated publications, but the 1914–18 War nearly brought it to an end. After that war the increased cost of production meant that the Magazine could only be published at a loss and in 1920 its proprietors, Messrs. Lovell Reeve, announced reluctantly that with the completion of volume 146 they would be obliged to cease publication. The last part of this volume appeared in December 1920. By keen gardeners and botanists alike the end of the Magazine was generally felt to be a disaster, but efforts to persuade the British Government to purchase the copyright for the sum of £250 and continue publication were unsuccessful. One of the leading horticulturists of the day, Henry John Elwes, whose powerful voice, forceful character, wide experience as a traveller and intimate knowledge of plants gained him a respectful hearing in any assembly, now played a decisive part in saving the Magazine. At a dinner held on the first night of the Chelsea Show, May 24, 1921, he discussed its

future. Mr. E. A. Bowles has recorded how that " the feeling among the leading horticulturists . . . was so strong that the Magazine should remain in this country that the requisite sum was at once found. The copyright was purchased on the following day." Later the subscribers presented it to the Royal Horticultural Society. Elwes' next task was to find an artist and an editor. Fortunately, Miss Lilian Snelling, who had previously painted many plants for him at Colesbourne and who had then worked at the Royal Botanic Garden, Edinburgh, under Sir Isaac Bayley Balfour, agreed to accept the position of artist. He was equally fortunate in persuading Dr. Otto Stapf, then retiring from the position of Keeper of the Herbarium and Library at the Royal Botanic Gardens, Kew, to undertake the editorship. The long association of the Magazine with Kew was thus preserved. The editor and artist had now to build up a stock of plates. Moreover, " the taking over of such an important publication by the Society necessitated fresh negotiations with new publishers and in view of the delays that were bound to occur, the Council of the Society decided to issue under the new régime a first volume dated 1922 but without creating a new series number, and thus a volume for the year 1921 would be missing. Mr. Reginald Cory, however, asked permission to fill the gap at his own expense. This offer was gladly accepted." Thus the *Botanical Magazine*, under the editorship of Otto Stapf, resumed publication in October 1922, not with the first part of volume 147 but with volume 148.

The plates were then, as they had been for 75 years, lithographed copies of the original water colour drawings which were coloured by hand. The drawing for the lithograph was not, however, made on limestone as in earlier years, but on a specially prepared zinc plate, and from the time she joined the Magazine staff Miss Snelling acted both as artist and lithographer. The colouring of the plates was done by hand-colourists working from a " sample " provided by the artist. Thus Miss Snelling had to make the original water-colour, re-draw it on zinc for reproduction and then colour a plate as a pattern for the colourists. For a time W. E. Trevithick of Kew also provided a number of drawings, as did a few other artists, and A. W. Darnell acted as lithographer, but most of the work was done by Miss Snelling. In 1929 Miss Stella Ross-Craig, whose first *Botanical Magazine* plate appeared in 1932, was appointed as an additional artist, and she has been associated with the Magazine ever since.

From 1922 until his death in 1933, Stapf not only edited the Magazine but wrote the text for nearly every plate. In his youth he had been a student of Anton Kerner's at Vienna, and to a keen recognition of fine but constant distinctions and an interest in plant geographical problems inculcated by Kerner, his work at Kew had added an exceptionally wide and profound knowledge of plant structure and classification. His erudition was matched only by his kindness of disposition. He critically investigated the identity of the plants figured and wrote detailed and trustworthy accounts of them. The dedication of volume 157 truly observed that " by his remarkable knowledge of plants, deep appreciation of their beauty and by his indefatigable industry in research " Stapf raised the *Botanical Magazine* " to a pre-eminent standard of excellence and usefulness." He gave a lecture to

the R.H.S. in 1925 on the history and mission of the *Botanical Magazine*, and this is printed in the JOURNAL, **51**, 29–43 (1926). In all, he edited nine volumes, namely, 148 to 156.

Stapf also wrote the major part of volume 147, the " Cory Volume " for 1921 which did not appear until 1938. It had an eventful history. As noted above, Mr. Reginald Cory, who was a wealthy industrialist, a keen amateur horticulturist and a collector of illustrated botanical books, offered to be responsible for this volume. To provide the plates the Regius Keeper of the Royal Botanic Garden, Edinburgh, lent Cory in 1922 a number of paintings made by Miss Snelling while working in Edinburgh. Up to 1928 all that was done with them was to have three plates reproduced by chromolithography. Till then all the plates had been hand-coloured. Cory wanted to try out other methods of colour-reproduction, a departure from tradition in which he was not encouraged. Moreover, he had his own opinions as to the plants to be figured and the kind of text to be written about them. In April 1928, Stapf was asked to take charge of this volume and in May he began work on it. By the end of 1931 all the plates had been drawn on zinc and all the colour patterns prepared ; much of the hand-colouring was done and much of the text in print. By April 1932 the text of the first part of the volume had been printed off and the manuscript of the second part was in the printer's hands, but then the work stopped as Cory objected to the use of various technical terms and wished to make numerous alterations in the text to conform to his own standards. For nearly nine months production was held up and in January 1933 Stapf stated that he could undertake no further responsibility for it. Stapf died in 1933, Cory himself in 1934, and four years later the volume was published under the editorship of Dr. John Ramsbottom of the British Museum (Natural History).

After Stapf's death Sir Arthur Hill, then Director of Kew, became Editor. He reverted to the older practice of entrusting the preparation of the text to a number of botanists. During his editorship the layout of the text was simplified and improved and the black and white drawings of floral details, etc., which had hitherto been reproduced on the coloured plate, were printed as a text-figure. The death in January, 1939, of the head of the small firm of hand-colourists responsible for colouring the Magazine plates brought about a period of great difficulty as regards their reproduction, which was rendered yet harder by war conditions. Of the last volume edited by Hill, volume 163, part 1 was published in 1940, part 3 in June 1941, part 2 in June 1942 and part 4 in July 1942. The stock of coloured plates and the text of part 2 was destroyed by fire in the great air-raid on London on the night of December 29–30, 1940, when the stocks of so many publishers were annihilated, and the part had to be prepared all over again. Hill died in October 1941, and Mr. A. D. Cotton, then Keeper of the Kew Herbarium, took over the editor's task. Conditions continued to worsen. Of volume 164, edited by Cotton, part 1 appeared in 1943, part 2 in 1944, part 3 in 1946 and part 4 in 1948. The delay was wholly due to the difficulty of getting the plates coloured by hand. With this volume the long-sustained practice of hand-colouring ended. It demanded great skill and care on the part of the colourist and people

to undertake the task could not be found. Reluctant though the Society was to abandon hand-colouring of the plates, the only alternative to their reproduction by a process of colour-printing was to cease publication of the Magazine.

In 1949 publication of the Magazine began anew under the editorship of Dr. W. B. Turrill, with plates reproduced by four-colour half-tone. Volume 165 thus started a new series, the sequence of volume numbers being maintained but the plate numbers beginning again at t. 1 ; this volume accordingly contained plates N.Ser. tt. 1–44 reproduced in four-colour half-tone. For the next three volumes (166–168) the process of photogravure was adopted, and the plates compare favourably with the best hand-colouring and are, indeed, much superior to the mediocre hand-coloured work found in some volumes of the Magazine.

TABLE I

DATES OF PUBLICATION OF THE VOLUMES OF THE BOTANICAL MAGAZINE

Vol.	Series	Vol.	Contents and Dates
1			1–33 (1787), 34–36 (1788)
2			37–69 (1788), 70–72 (1789)
3			73–105 (1789), 106–108 (1790)
4			109–141 (1790), 142–144 (1791)
5			145–177 (1791), 178–180 (1792)
6			181–213 (1792), 214–216 (1793)
7			217–249 (1793), 250–252 (1794)
8			253–285 (1794), 286–288 (1795)
9			289–321 (1795), 322–324 (1796)
10			325–357 (1796), 358–360 (1797)
11			361–393 (1797), 394–396 (1798)
12			397–429 (1798), 430–432 (1799)
13			433–465 (1799), 466–468 (1800)
14			469–501 (1800), 502–504 (1801)
15			505–544 (1801), 545–548 (1802)
16			549–596 (1802)
17			597–612 (1802), 613–644 (1803)
18			645–692 (1803)
19			693–708 (1803), 709–739 (1804)
20			740–786 (1804)
21			787–801 (1804), 802–832 (1805)
22			833–880 (1805)
23			881–895 (1805), 896–923 (1806)
24			923*–966 (1806)
25			967–982 (1806), 983–1013 (1807)
26			1014–1059 (1807)
27			1060–1073 (1807), 1074–1101 (1808)
28			1102–1147 (1808)
29			1148–1162 (1808), 1163–1191 (1809)
30			1192–1236 (1809)
31			1237–1251 (1809), 1252–1282 (1810)
32			1283–1328 (1810)
33			1329–1344 (1810), 1345–1373 (1811)
34			1374–1418 (1811)
35			1419–1432 (1811), 1433–1459 (1812)
36			1460–1501 (1812)
37			1502–1517 (1812), 1518–1547 (1813)
38			1548–1591 (1813)
39			1592–1605 (1813), 1606–1635 (1814)
40			1636–1681 (1814)
41			1682–1695 (1814), 1696–1725 (1815)
42			1726–1770 (1815)

TABLE II

LIST OF PERSONS TO WHOM THE VOLUMES OF THE BOTANICAL MAGAZINE FROM 1827 TO 1955 HAVE BEEN DEDICATED

Volume	54. 1827	Robert Barclay, Esq., of Bury Hill, Dorking.
	55. 1828	William Townsend Aiton, Esq., Royal Gardens, Kew and Richmond.
	56. 1829	Joseph Sabine, Esq., F.R.S., F.L.S., Hon. Sec. Horticultural Society of London, 1810–30.
	57. 1830	Charles Telfair, Esq., Mauritius.
	58. 1831	John Russell, 6th Duke of Bedford, of Woburn Abbey.
	59. 1832	Charles William Wentworth Fitzwilliam, K.G., 3rd Earl Fitzwilliam, of Wentworth, at the time of the Dedication, The Right Hon. Lord Viscount Milton.
	60. 1833	The Right Honourable Countess of Dalhousie, of Dalhousie Castle (*née* Christian Brown).
	61. 1834	William George Spencer Cavendish, K.G., 6th Duke of Devonshire, of Chatsworth, President, Horticultural Society of London, 1838.
	62. 1835	Carl Ferdinand Heinrich von Ludwig, Ph.D., of Wirtemberg and S. Africa.
	63. 1836	Friedrich Ernst Ludwig Fischer, M.D., sometime Director, Imperial Botanic Garden, St. Petersburg.
	64. 1837	James Bateman, Esq., M.A., F.R.S., F.L.S., of Knypersley Hall, Cheshire.
	65. 1838	Hon. and Rev. William Herbert, B.D., Dean of Manchester.
	66. 1839	John Parkinson, Esq., F.R.S., F.L.S., H.B.M., Consul-General in Mexico.
	67. 1840	Mrs. Martha Wray (*née* Read), of Oakfield, Cheltenham. (No portrait known.)
	68. 1841	Mrs. Louisa Trevor Lawrence (*née* Senior), of Ealing Park, Middlesex. (*See* Sir Trevor Lawrence.)
	69. 1842	Mrs. Margaret Dorothea Sherbourne (*née* Willis), of Hurst House, Prescott, Lancs.
	70. 1843	Prince Joseph Maria Franz Anton Hubert Ignaz du Salm-Reifferscheitd Dyck, of Castle Dyck, Düsseldorf.
	71. 1845	Henry Pelham Fiennes Pelham-Clinton, K.G., 5th Duke of Newcastle-under-Lyme.
	72. 1846	Rev. John Clowes, M.A., of Broughton Hall, Manchester.
	73. 1847	Capt. Sir James Everard Home, Bt., R.N., F.R.S.

Volume	74. 1848	Charles William Frederick Howard, K.G., 7th Earl of Carlisle.
	75. 1849	Sir Laurence Peel, D.C.L., Chief Justice of Supreme Court, Calcutta.
	76. 1850	Dr. John Torrey, botanist, of New York.
	77. 1851	Dr. Asa Gray, botanist, of New York, and collaborator with Torrey.
	78. 1852	Dr. Nathaniel Bagshaw Ward, F.R.S., F.L.S., sometime of the Physic Garden, Chelsea.
	79. 1853	Sir Henry Barkly, K.C.M.G., F.R.S., of S. Africa, etc.
	80. 1854	Rev. Miles Joseph Berkeley, M.A., F.R.S., Cryptogamic Botanist, Secretary to Scientific Committee, Royal Horticultural Society.
	81. 1855	Dr. Thomas Thomson, M.D., F.R.S., F.L.S., Superintendent, Botanic Garden, Calcutta.
	82. 1856	Lady Dorothy Fanny Neville (*née* Walpole).
	83. 1857	James Townsend Mackay, Esq., LL.D., Curator, Trinity College Botanic Garden, Dublin.
	84. 1858	Mary Anne Grace Louisa Lenox St. Leger, Viscountess Doneraile (*née* Conyngham), of Doneraile, Ireland, and Gresy sur Aix.
	85. 1859	Decimus Burton, Esq., F.R.S., F.S.A., architect of the Palm House, Kew.
	86. 1860	George Henry Kendrick Thwaites, Esq., F.R.S., F.L.S., Superintendent, Royal Botanic Garden, Peradeniya, Ceylon.
	87. 1861	Sir Ferdinand Jakob Heinrich Müller, Ph.D., M.D., K.C.M.G., F.R.S., F.L.S., Director, Botanic Garden, Melbourne.
	88. 1862	Thomas Bell, Esq., V.P.R.S., F.G.S., P.L.S.
	89. 1863	Dr. Robert Wight, M.D., botanized in India.
	90. 1864	Dr. Frederick Martin Josef Welwitsch, botanical explorer in Portugal, Angola, etc.
	91. 1865	Dr. Thomas Anderson, M.D., Superintendent, Botanic Garden, Calcutta.
	92. 1866	William Wilson Saunders, Esq., F.R.S., V.P.L.S.
	93. 1867	Prof. Daniel Oliver, F.R.S., F.L.S., Keeper, Herbarium, Royal Botanic Gardens, Kew.
	94. 1868	Prof. Heinrich Gustav Reichenbach, Director, Hamburg Botanic Garden.
	95. 1869	Walter Hood Fitch, Esq., F.L.S., artist and lithographer.
	96. 1870	Rev. Charles Samuel Pollock Parish, M.A., Chaplain at Moulmein, Burma.
	97. 1871	Isaac Anderson-Henry, Esq., F.L.S. (*née* Anderson), solicitor and amateur of gardening.
	98. 1872	Prof. John Hutton Balfour, M.D., F.R.S., F.L.S., Regius Keeper, Royal Botanic Garden Edinburgh.

VOLUME 99. 1873 DAVID MOORE, Ph.D., F.L.S. (*née* Muir), Superintendent, Royal Dublin Society's Botanic Garden, Glasnevin.

100. 1874 GEORGE MAW, Esq., F.L.S., F.G.S., of Broseley, Shropshire.

101. 1875 Dr. MAXWELL TYLDEN MASTERS, M.D., F.R.S., F.L.S., botanist and Editor, *Gardeners' Chronicle*.

102. 1876 WILLIAM THOMPSON, V.M.H., nurseryman, of Ipswich.

103. 1877 HENRY JOHN ELWES, Esq., F.L.S., F.Z.S., V.M.H., of Colesbourne, traveller and naturalist.

104. 1878 ROBERT HOGG, Esq., LL.D., F.L.S., pomologist.

105. 1879 Sir GEORGE KING, M.B., F.R.S., F.L.S., V.M.H., Superintendent, Royal Botanic Garden, Calcutta.

106. 1880 Dr. JOHN GILBERT BAKER, D.Sc., F.R.S., F.L.S., V.M.H., Keeper, Herbarium, Royal Botanic Gardens, Kew.

107. 1881 Rev. Canon HENRY NICHOLSON ELLACOMBE, M.A., V.M.H., Vicar of Bitton.

108. 1882 GEORGE JOAD, Esq., F.L.S., F.Z.S., of Wimbledon, one of the earliest cultivators of rock plants.

109. 1883 Herr MAX LEICHTLIN, of Baden-Baden, botanist and gardener.

110. 1884 JOHN BALL, Esq., M.A., F.R.S., F.L.S., botanist and traveller.

111. 1885 Dr. EDUARD AUGUST REGEL, of Gotha, founder of Gartenflora, Director, Imperial Botanic Garden, St. Petersburg.

112. 1886 Sir JAMES JOHN TREVOR LAWRENCE, Bt., K.C.V.O., V.M.H., President, Royal Horticultural Society.

113. 1887 Sir JOHN KIRK, G.C.M.G., F.R.S., F.L.S., British Consul-General at Zanzibar.

114. 1888 CHARLES BARON CLARKE, Esq., M.A., F.R.S., F.L.S., botanist and traveller.

115. 1889 Prof. Sir ISAAC BAYLEY BALFOUR, K.B.E., D.Sc., M.D., F.R.S., V.M.H., Regius Keeper, Royal Botanic Garden, Edinburgh.

116. 1890 GEORGE FERGUSSON WILSON, Esq., F.R.S., F.L.S., V.M.H., of Weybridge, founder of the Wisley Garden.

117. 1891 Sir MOUNTSTUART ELPHINSTONE GRANT DUFF, M.A., G.C.S.I., C.I.E., F.R.S., F.L.S., President Royal Geological Society.

118. 1892 HENRY TRIMEN, Esq., M.B., F.R.S., F.L.S., Superintendent, Royal Botanic Garden, Peradeniya, Ceylon.

119. 1893 Sir THOMAS HANBURY, K.C.V.O., F.L.S., V.M.H., La Mortola, donor of the Wisley Garden to the Royal Horticultural Society.

VOLUME 120. 1894 CHARLES FORD, Esq., I.S.O., F.L.S., Superintendent, Botanic Garden, Hong Kong.

121. 1895 HARRY BOLUS, Esq., D.Sc., F.L.S., botanist of South Africa.

122. 1896 Herr GUSTAV MANN, of Brunswick and Assam, botanist and plant collector.

123. 1897 ALGERNON BERTRAM FREEMAN-MITFORD, LORD REDESDALE, C.B., F.L.S., V.M.H., Secretary, Office of Works.

124. 1898 Dr. WILLIAM BOTTING HEMSLEY, LL.D., F.R.S., F.L.S., V.M.H., Keeper, Herbarium, Royal Botanic Gardens, Kew.

125. 1899 HENRY LÉVEQUE DE VILMORIN, head of the nursery firm, Vilmorin-Andrieux et Cie, of Paris.

126. 1900 Lieutenant-Colonel Sir DAVID PRAIN, K.C.M.G., M.B., LL.D., F.R.S., F.L.S., V.M.H., Director, Royal Botanic Gardens, Kew.

127. 1901 Hon. CHARLES ARTHUR ELLIS, F.L.S., of Frensham Hall, Haslemere, traveller and naturalist.

128. 1902 Prof. AUGUSTINE HENRY, M.A., L.R.C.P., F.L.S., V.M.H., of the Imperial Maritime Customs, China, Professor of Forestry, Dublin, etc.

129. 1903 GEORGE NICHOLSON, Esq., F.L.S., V.M.H., Curator, Royal Botanic Gardens, Kew.

130. 1904 WILLIAM WATSON, Esq., A.L.S., V.M.H., Curator, Royal Botanic Gardens, Kew.

131. 1905 HARRIET ANN, LADY THISELTON-DYER (*née* Hooker), who contributed many drawings to the *Botanical Magazine*.

132. 1906 HENRY NICHOLAS RIDLEY, C.M.G., M.A., F.R.S., F.L.S., Director, Botanic Garden, Singapore.

133. 1907 Miss ELLEN ANN WILLMOTT, F.L.S., V.M.H., of Warley Place, Brentwood.

134. 1908 Sir JOSEPH DALTON HOOKER, G.C.S.I., O.M., C.B., M.D., V.M.H., etc., Director, Royal Botanic Gardens, Kew; Editor, *Botanical Magazine*.

135. 1909 Sir FREDERICK WILLIAM MOORE, M.A., A.L.S., V.M.H., Keeper, Royal Botanic Garden, Glasnevin. *See* Dr. DAVID MOORE.

136. 1910 Sir HARRY JAMES VEITCH, Esq., F.L.S., V.M.H., noted nurseryman.

137. 1911 Prof. CHARLES SPRAGUE SARGENT, LL.D., Director Arnold Arboretum, near Boston, U.S.A.

138. 1912 JOHN MEDLEY WOOD, D.Sc., A.L.S., Director, Botanic Garden, Durban, Natal.

139. 1913 Sir FRANK CRISP, Bt., LL.B., F.L.S., V.M.H., solicitor.

140. 1914 Prof. HENRY HAROLD WELCH PEARSON, M.A., Sc.D., F.R.S., F.L.S., Director, National Botanic Garden, S. Africa.

VOLUME 141.	1915	SAMUEL THOMAS HEARD, Esq., M.D., of India and Rossdohan, Co. Kenmore.
142.	1916	Sir WILLIAM TURNER THISELTON-DYER, B.Sc., K.C.M.G., C.I.E., F.R.S., F.L.S., Director, Royal Botanic Gardens, Kew ; Editor, *Botanical Magazine*.
143.	1917	RICHARD IRWIN LYNCH, Esq., M.A., F.L.S., V.M.H., Curator, University Botanic Garden, Cambridge.
144.	1918	JOHN CHARLES WILLIAMS, Esq., of Caerhays, Cornwall.
145.	1919	Dr. ERNEST HENRY WILSON, M.A., D.Sc., V.M.H., botanical traveller in China, etc. Keeper, Arnold Arboretum.
146.	1920	Rev. WILLIAM WILKS, M.A., V.M.H., Secretary, Royal Horticultural Society.
147.	—	Sir DAVID PRAIN, Sir ISAAC BAYLEY BALFOUR, Sir FREDERICK WILLIAM MOORE. *See above.*
148.	1922–1923	GEORGE FORREST, F.L.S., V.M.H., botanical explorer and collector in China.
149.	1923–1924	Sir HERBERT EUSTACE MAXWELL, Bt., D.C.L., LL.D., F.R.S., V.M.H., of Monreith.
150.	1924–1925	Sir JOHN FOSTER GEORGE ROSS, of Bladensburg, K.C.B., K.C.V.O., LL.D., of Rostrevor, Co. Down.
151.	1925–1926	EDWARD AUGUSTUS BOWLES, Esq., M.A., F.L.S., F.R.E.S., V.M.H., of Myddelton House, Enfield.
152.	1927–1928	Miss GERTRUDE JEKYLL, V.M.H., of Munstead, Surrey.
153.	1929–1930	Prof. LIBERTY HYDE BAILEY, B.S., LL.D., Director, Bailey Hortorium, Ithaca, N.Y., U.S.A.

Portraits of all the foregoing except Mrs. WRAY, and notes on their work for Botany and Horticulture are contained in *Curtis's Botanical Magazine Dedications, 1827–1927*, by ERNEST NELMES and WILLIAM CUTHBERTON, V.M.H. (Royal Horticultural Society, 1931.)

Portraits of the following accompany the dedications in the volumes indicated.

VOLUME 154.	VICARY GIBBS, Esq., V.M.H., of Aldenham, Herts.
155.	THOMAS HAY, Esq., C.V.O., V.M.H., Keeper of Hyde Park, etc.
156.	GERALD WALTER ERSKINE LORD WAKEHURST (*née* LODER), of Wakehurst Place, Ardingley, Sussex.
157.	Dr. OTTO STAPF, Ph.D., F.R.S., F.L.S., Keeper, Herbarium, Royal Botanic Gardens, Kew ; Editor, *Botanical Magazine*.
158.	Sir WILLIAM WRIGHT SMITH, M.A., F.R.S., F.L.S., V.M.H., Regius Professor of Botany, Edinburgh.

VOLUME 159.		CHARLES THOMAS MUSGRAVE, B.A., V.M.H., of Hascombe, Godalming, Surrey.
160.		WILLIAM JACKSON BEAN, I.S.O., V.M.H., Curator, Royal Botanic Gardens, Kew.
161.		Dr. ALFRED BARTON RENDLE, M.A., F.R.S., F.L.S., V.M.H., Keeper, Dept. of Botany, British Museum, S. Kensington.
162.		Capt. FRANK KINGDON-WARD, V.M.H., botanical explorer.
163.		Sir ALFRED DANIEL HALL, M.A., F.R.S., Director, Rothamsted Experimental Station and John Innes Horticultural Institution.
164.		Sir ARTHUR WILLIAM HILL, M.A., D.Sc., Sc.D., F.R.S., F.L.S., Director, Royal Botanic Gardens, Kew ; Editor, *Botanical Magazine*.
165.		FREDERICK JAMES CHITTENDEN, F.L.S., V.M.H., Director of the Royal Horticultural Society's Gardens, Wisley, and Editor of its Journal and publications.
166.		LORD ABERCONWAY OF BODNANT, C.B.E., LL.D., V.M.H., President of the Royal Horticultural Society, 1931–53.
167.		JOHN BARR STEVENSON, V.M.H., of Tower Court, Ascot, Berkshire.
168.		Col. FREDERICK CLAUDE STERN, O.B.E., M.C., F.L.S., V.M.H., of Highdown, Goring-by-Sea, Sussex.
169.		LILIAN SNELLING, botanical artist and lithographer.
170.		Major ALBERT PAM, O.B.E.(Mil.), M.A., F.L.S., V.M.H., of Wormley Bury, nr. Broxbourne, Hertfordshire.

TABLE III

EDITORS OF THE BOTANICAL MAGAZINE

Vols. 1–13 (plates 1–468). Edited by WILLIAM CURTIS.
Vols. 14–53 (plates 469–2704). Edited by JOHN SIMS.
Vols. 54–90 (plates 2705–5485). Edited by WILLIAM JACKSON HOOKER.
Vols. 91–130 (plates 5486–7991). Edited by JOSEPH DALTON HOOKER.
Vols. 131–132 (plates 7992–8111). Edited by WILLIAM TURNER THISELTON-DYER.
Vols. 133–146 (plates 8112–8873). Edited by DAVID PRAIN.
Vol. 147 (plates 8874–8933). Edited by JOHN RAMSBOTTOM.
Vols. 148–156 (plates 8934–9336). Edited by OTTO STAPF.
Vols. 157–163 (plates 9337–9644). Edited by ARTHUR WILLIAM HILL.
Vol. 164 (plates 9645–9688). Edited by ARTHUR DISBROWE COTTON.
Vol. 165 *et seq.* (new series, plates 1–44 *et seq.*). Edited by WILLIAM BERTRAM TURRILL.

APPENDIX

INDEX—New Series

The Index of the *Botanical Magazine* as prepared by F. J. Chittenden, F.L.S., V.M.H., did not include the volumes of the New Series which started with Vol. 165 in 1948. Plates were numbered, starting again with Tab. 1. The following index gives the plate numbers and the title of the plates only in volumes 165–170.

Abelia chinensis 168
Abeliophyllum distichum 10
Abies koreana 40
  Mariesii 45
  Pinsapo vel hybrida 242
Adenocarpus decorticans 48
Adonis brevistyla 24
Aërides Houlletianum 260
Allium acuminatum 213
  bulgaricum 257
  cyathophorum Farreri 252
Alstroemeria violacea 42
Arbutus unedo rubra 203
Arum creticum 101
Asteranthera ovata 15
Atherosperma moschatum 43
Berberis aemulans 179
  gyalaica 22
  Johannis 57
  Lempergiana 90
  parisepala 119
  polyantha 236
  sikkimensis 173
  umbellata 145
  valdiviana 139
Bergenia purpurascens Delavayi 117
Bredia tuberculata 49
Bryophyllum Daigremontianum 167
Buddleia Forrestii 93
  heliophila 193
Bulbophyllum Frostii 121
Calodendrum capense 34
Camellia oleifera 221
Campanula Portenschlagiana 256
  Reiseri 178
Campsis × Tagliabuana 198
Carmichaelia Williamsii 70
Carrierea calycina 53
× Caryopteris clandonensis 75
Cassiope Wardii 151
Ceanothus purpureus 37
Celsia acaulis × Verbascum sp. 97
  sinuata 175
Centaurea hypoleuca 95
Ceratostigma plumbaginoides 210
Cestrum elegans Smithii 249
Chimonanthus praecox 184
Chionodoxa sardensis 50
× Chionoscilla Allenii 207
Chorizema cordatum 237
Chrysanthemum Gayanum 183
  ochroleucum 67
Cirsium rivulare atropurpureum 217
Cistus Palhinhaii 157
Clematis Colensoi var. 250
Codonopsis macrocalyx 94
  rotundifolia angustifolia 131
  vinciflora 59
Coelogyne pulchella 28
Colchicum lusitanum 21
Colquhounia coccinea 115
Convolvulus Pitardii leucochonous 240
Coprosma nitida 88
Corallodiscus kingianus 6
Cotoneaster Franchetii Sterniana 130
  hupehensis 245
Crataegus Ellwangeriana 105
Crocus ancyrensis 99
  chrysanthus citrinus 182
  niveus 146
  nubigena 235
  nudiflorus 169
Crotalaria Raffillii 111
Cyclamen Rohlfsianum 192
  vernum 29
Cymbidium Tracyanum 56
Cynara hystrix 172
Cynoglossum amabile parviflorum 82
Cyrtanthus falcatus 202
Cytisus absinthioides 87
  Ingrami 211
Daboecia azorica 46
× Daphne Burkwoodii 55
Delphinium Delavayi 68
  orientale 186
Deutzia Monbeigii 123
  × rosea 189
Dianthus haematocalyx alpinus 9
Doryophora Sassafras 30

Drimys Winteri chilensis 200
Drosanthemum splendens 44
